

Injection Moulding Technique

HANDS ON WORKSHOP

WITH DR RL CASTILLO

***REGISTRATION INCLUDES FREE 1x G-AENIAL UNIVERSAL INJECTABLE A2 SYRINGE**

The Injection Moulding Technique allows the clinician to transfer anatomical details from a wax-up to the mouth. The use of a clear silicone material as a stent enables the accurate replication of the template from the wax-up producing beautiful aesthetic results with ease. With the use of an injectable composite, creating smile transformation is possible without carrying out extensive dental procedures to achieve ceramic-like restorations. The conservative solution of using direct restorative techniques makes creating superior aesthetics and long-lasting restorations achievable.

In this workshop you will learn:

- how-to: injection moulding technique
- clinical tips and tricks to achieve excellent results
- simple finishing polishing

DR. RL HALILI-CASTILLO
Presenter

RL earned her Doctor of Dental Medicine degree in the Philippines and brings over 20 years of experience in the dental industry. She refined her clinical expertise and management skills through her own dental practice, delivering comprehensive patient care. Her commitment to oral health led her to Singapore's Health Promotion Board School Dental Services, where she practiced and focused on advancing oral health programs for school children. Now, as part of the Professional Development team at GC Australasia Dental, RL leads training and education initiatives across the region, specializing in fibre technology, aesthetics, and adhesive and restorative dentistry, helping clinicians elevate their skills and patient outcomes.
